CISTERN DAM

Green Logic's Cistern Dam dramatically reduces the amount of water needed per toilet flush.

Most toilets use far more water than necessary to provide a flush. The easy-to-install device creates a barrier within your toilet tank that restricts the water released when the flush lever is activated. You get a full flush with less water. In a typical installation, the Green Logic Cistern Dam can save as much as £100 per toilet or more on your annual water bill.

DATA

Water Saving
1-3 litres per Flush
Fully adjustable
Dimensions 222 x 125 cm

MATERIALS

Rubberised Surround
Stainless Steel insert

APPLICATION

Quick & easy to fit into
new and old cisterns and
does not interfere with
or require removal of
cistern moving parts
