SANSEAU

is the advanced solution to an age old problem:

“How can I clean and sanitize my hands where there is no water?”

SANSEAU is scientifically engineered to replace water-activated disinfectant soap. It is ideal for use in locations such as portable toilets and mobile health service vehicles, and to supplement or replace water washing facilities in public toilets.

SANSEAU is potent enough for use by doctors, nurses, health workers, vets, police, pest control, food handlers, cleaners and anyone else who needs to clean off dirt while they sanitize their hands. SANSEAU is available in a scent-free formulation for catering and food services, and a peach-scented formulation for healthcare, school, washroom and other uses.

SANSEAU is easy to use

SANSEAU waterless disinfecting hand wash is a liquid that becomes a foam when applied. Just apply SANSEAU, rub in, and wipe the dirt away. Because it spreads easily, it does not require water. Your hands will be dirt free and sanitized against bacteria. A special cream additive keeps skin soft as well as clean. It's so fast, and feels so good, that hand washing is a pleasure.

SANSEAU Saves Water, Paper & Electricity

SANSEAU's benefits go well beyond convenience. By eliminating the need for water, it also eliminates the need for paper towels and electric hand dryers. This saves money and helps protect the environment. And without water, wet and slippery floors are eliminated.

SANSEAU is also cost effective. You will get at least **60% more** hand washes per litre than is possible with traditional hand soaps.

Isn't it time to take a hard look at the advantages of SANSEAU waterless hand wash? For more information, contact:
